

**STATE OF
THE PLANET**
A special series**TRAGEDY OF
THE COMMONS?**
A special issue

In the 12 December 2003 issue *Science*, we round out our recent coverage Earth's resources and their management with a [special issue](#) -- nine Review and Viewpoint articles that commemorate the anniversary of the 1968 publication of the late Garrett Hardin's classic essay, "[The Tragedy of the Commons](#)," and take a look at trends in the management of common resources in the 35 years since the essay's publication. We've also put together a special collection of [online resources](#), including the links to the original essay and some of the subsequent scientific discussion it engendered, as well as pointers to Web sites that provide additional context.

For additional coverage of the issues facing Planet Earth over the next 50 years, be sure to check out our four-week "[State of the Planet](#)" series published in the issues running from 14 November to 5 December. The series includes eight Viewpoint pieces on topics ranging from population to energy to fisheries to global change, with each article supplemented by a collection of related Web resources and articles.
